TUBER AESTIVUM Vitt. /Var UNCINATUM

Oaks (holm and pubescent)

- Hornbeam, common hazel

- Lime trees, black pines (consult us)

PRICES ON REQUEST, it depends on the destination country !

Actitruffe and Actitruffe + (re-inoculation products) :

Acti Truffe is a preparation based on natural products and truffle spores designed to boost the mycelial life of your truffle bed in order to start or improve the productivity of mycorrhized trees.

Acti Truffe + is also a preparation based on natural products and truffle spores, except that here the spores are coated in alginate.

Advantages of the coating:

The product is in a water-rich environment which should favour the development of the mycelium and protect it from temporary drought.

The blue colour is an excellent visual tracer: the seeds are easier to spot in the soil and the distribution of the product is thus easy to control.

The distribution of the spores in the product is homogeneous, which guarantees that the same number of spores are provided for the same quantity of beads.

Terra Truffe

Plantation

Terra Truffe - Plantation - is the substrate you need to put all the chances on your side, as soon as you plant your truffle plants. Thanks to wood fibre and zeolite, this potting soil helps to retain water in your soil. Instructions for use: 50% Terra Truffe - Plantation - to be mixed with 50% of your soil.

Volume of a bag: 50 litres

Terra Truffe

Dynamisation

Terra Truffe - Dynamisation - is an ideal substrate to carry out and complete a contribution of spores. It is therefore compatible with Acti-Truffe and Acti'Truffe + products.

Volume of a bag: 50 litres
